

Delta US 50 and SH 92 Access Plan

As the area surrounding Delta grows, traffic is increasing on US 50 and SH 92. The purpose of the access study is to identify access improvements that can be made as sites redevelop to help improve safety, efficiency and extend capacity along the corridors. The goal of the project is to develop an Access Control Plan for approval by the CDOT Transportation Commission, City Council, and Board of County Commissioners. An Access Control Plan is a method defined by the State Highway Access Code for local government and CDOT to cooperatively plan for future access to the State Highway system. An Access Control Plan allows the City and County to participate in making decisions about access that are more consistent with the local vision, corridor specific conditions, existing and future land use, and the local transportation system rather than having access defined solely by the criteria from the State Highway Access Code. The plan will help reduce conflicts, maximize the capacity of US 50 and SH 92, and provide a template to guide future development and redevelopment for staff, developers and property owners.

The access study on US 50 extends from Starr Nelson Road to SH 92. The access study on SH 92 extends from US 50 to Austin Road/2200Road. A draft access plan has been developed with the intention of soliciting public comment. Please contact a project representative with questions:
